

MOVEMATE

AI-POWERED FITNESS COACHING FOR CONSISTENCY, PERSONALIZATION, AND MEASURABLE PROGRESS

THE CASE STUDY

MoveMate reflects my approach to product strategy: define the problem clearly, focus on the right user need, prioritize what matters most, and build toward measurable outcomes.

Problem framing

Identified a clear opportunity in fitness around personalization, consistency, and measurable progress

Product thinking

Translated the opportunity into a focused product concept, MVP, and user experience flow

Strategic decision-making

Used competitor analysis, prioritization, GTM planning, and roadmap sequencing to shape direction

Metric-led approach

Defined success through activation, engagement, retention, and monetization metrics

This case study demonstrates how I approach product problems with structured thinking, practical prioritization, and business-oriented execution.

MOVEMATE

PRODUCT OVERVIEW

FEATURES

GO-TO-MARKET

ROADMAP

THE PRODUCT

MoveMate is an AI-powered fitness product designed to help users stay consistent, track progress, and receive more personalized support in their fitness journey.

It combines adaptive workout planning, real-time progress visibility, and wearable integration to create a simpler and more measurable fitness experience.

The product is designed for health-conscious individuals aged 25–50 who want fitness support that feels more personal, flexible, and outcome-driven.

TARGET USER & POSITIONING

Segment

- Demographic
 - 25–50-year-old professionals with disposable income
- Psychographic
 - Health-conscious, tech-savvy, and goal-driven individuals
- Behavioral
 - Fitness app users looking for personalization and wearable integration

Target

- Primary
 - Urban professionals (25–45) who already use wearables and want more adaptive fitness support
- Secondary
 - Corporate wellness programs and remote workers seeking structured digital fitness solutions

Positioning

- *MoveMate is positioned as an AI-powered fitness coach that offers smarter personalization than basic trackers and more flexibility than static workout plans.*

THE MARKET GAP

Competitor	What they do well	Where the gap remains
Fitbit Premium	Strong fitness tracking and wearable ecosystem	Limited deep personalization in workout coaching
Nike Training Club	High-quality content and brand trust	Less adaptive planning based on real-time user progress
Centr	Holistic wellness experience	Premium positioning may feel expensive or high-commitment
Freeletics	Personalized digital coaching	Can feel intense and less flexible for broader user needs
Peloton	Guided and engaging fitness experience	Requires higher commitment and is less accessible for all users

Opportunity for Movemate

PRODUCT PRIORITIES

To deliver early value, MoveMate should focus on the few features that directly improve personalization, consistency, and measurable progress.

AI Workout Engine

Personalized workout plans based on user goals, preferences, and fitness level

Progress Tracker

Real-time visibility into workout completion, progress trends, and goal movement

Wearable Integration

Syncs activity and health data to make recommendations more adaptive and useful

These features form the MVP because they create the strongest foundation for user value, engagement, and future product expansion.

PRIORITIZATION LOGIC

I used prioritization to focus on features that would deliver the highest early user value while remaining feasible for an MVP launch.

Feature	Why it matters	Priority
AI Workout Engine	Core to personalization and the main reason users would choose MoveMate	High
Progress Tracker	Helps users stay consistent by making improvement visible	High
Wearable Integration	Makes recommendations more adaptive and increases product usefulness	High
Nutrition Guidance	Expands value, but not essential for first user validation	Medium
Social / Community Features	Useful for engagement later, but not required to prove core product value	Low

The prioritization approach ensures that MoveMate launches with the smallest feature set needed to validate product value, improve engagement, and support future expansion.

USER EXPERIENCE FLOW

I used prioritization to focus on features that would deliver the highest early user value while remaining feasible for an MVP launch.

Onboarding

User signs up and shares fitness goals, preferences, and lifestyle details

Profile Setup

MoveMate builds a starting profile using goals, fitness level, and health data

Profile Setup

MoveMate builds a starting profile using goals, fitness level, and health data

Workout Tracking

User completes sessions and progress is captured in real time

Progress Visibility

The product shows improvement through milestones, trends, and performance feedback

Adaptive Guidance

Recommendations improve over time based on user behavior and data inputs

USER EXPERIENCE FLOW

I used prioritization to focus on features that would deliver the highest early user value while remaining feasible for an MVP launch.

GO TO MARKET STRATEGY

MoveMate should launch with a focused acquisition strategy aimed at validating early adoption, engagement, and retention before expanding further.

The launch strategy focuses on proving product value and user stickiness first, before scaling into broader growth and partnership channels.

PRODUCT ROADMAP

The roadmap is designed to validate core product value first, strengthen engagement next, and expand into broader ecosystem opportunities over time.

Phase 1 – MVP Launch

- AI Workout
- Progress tracker
- Wearable integration
- Goal – Validate personalization, usability, and user engagement

Phase 2 – Deepen Engagement

- Nutrition Guidance
- Recovery Recommendation
- Smarter reminders and nudges
- Goal – Improve consistency, retention, and habit formation

Phase 3 – Expand the product

- Social/Community features
- Corporate wellness dashboard
- Advanced AI wellness insights
- Goal – Drive broader adoption, partnership, and long term product differentiation

The sequencing ensures MoveMate does not try to build everything at once, and instead grows from a focused MVP into a more complete fitness ecosystem.

ecosystem
complete fitness

SUCCESS METRICS

To evaluate product performance, MoveMate should track a small set of metrics across activation, engagement, and monetization.

Activation

- Onboarding completion rate
- First workout started
- First workout completed

Engagement & Retention

- Weekly active users
- 7-day retention
- 30-day retention
- Workout completion rate
- DAU / MAU

Monetization

- Premium conversion rate
- Churn rate
- Average revenue per user

North Star Metric

- Weekly active users completing personalized workouts

These metrics help measure whether MoveMate is attracting the right users, delivering consistent value, and building a sustainable product model.

PRODUCT LIFECYCLE

CHANNEL STRATEGY & FEATURES ROADMAP

Channel	Budget Allocation	Strategy
Paid Ads (Meta + Google)	35%	High-intent keyword targeting, retargeting
Influencer Collaborations	15%	Partner with micro fitness influencers & YouTubers
App Store Optimization (ASO)	10%	Focus on visibility, reviews & ratings
Content Marketing (SEO + Blog + Reels)	15%	Wellness education, AI benefits, case studies
Referral Program	10%	Incentivized signups via fitness communities
Corporate Sales (B2B)	10%	Direct partnerships, pilot with HRs
Events/Webinars	5%	Webinars with fitness experts, startup expos

Stage	Key Feature	Launch Timing
Beta	Personalized AI Workout Engine	Ongoing
MVP	Real-time Progress Tracker, Wearable Sync	Launch
V1.0	Virtual Trainers, Nutrition Plans	3–6 months
Scale Phase	Social Fitness Challenges, Corporate Dashboards	Year 1
Expansion	Integrate AR workouts, AI wellness scoring	Year 2–3

CORE FEATURES & RICE SCORES

Core Functional Features

Core Features

AI-Powered Personalized Fitness Plans

Custom workout plans based on user data and AI analysis

Real-Time Data Tracking & Feedback

Tracks activity data from wearables and provides feedback

Progress Dashboards & Reports

Displays insights, trends, and goal achievement status

Live Virtual Trainers (Advanced Tier)

Streams sessions with certified trainers via video

Secondary Supporting Features

Goal-Based Challenges & Streaks

Gamifies fitness with challenges, badges, and streaks

Social Integration & Community Features

Enables group challenges, friend invites, leaderboards

Workout Library (Freemium Access)

Provides on-demand workouts filtered by different criteria

Voice & Haptic Guidance

Gives in-workout guidance via voice and haptics

Admin & Operational Features (STAKEHOLDER-ORIENTED)

Analytics & Performance Dashboard (for PMs)

Tracks retention, engagement, and plan adherence metrics

Feedback & Issue Reporting System

Allows users to report bugs or make suggestions

Feedback & Issue Reporting System

Allows users to report bugs or make suggestions

Subscription & Billing Management

Manages payments and user subscriptions

METRICS & ANALYTICS

Lifecycle Stage	Primary Metrics	Secondary Metrics	Input Metrics	Output Metrics	North Star Metric
1. Introduction	- App Downloads - Onboarding Completion	- App Store CTR - Bounce Rate	- Marketing Impressions - Ad Clicks	- Number of Installs - Sign-ups	New Users Acquired
2. Growth	- DAU/MAU Ratio - Retention (7, 30 day)	- Feature Usage - Push Notification CTR	- Content Volume - User Sessions	- Conversion to Premium - Workout Completion Rate	Daily Active Users (DAU)
3. Maturity	- ARPU - Churn Rate	- In-App Purchases - Workout Ratings	- Feature Releases - Customer Feedback	- Revenue - Customer Satisfaction (NPS)	Revenue Per Active User
4. Decline	- Churn Rate - Reactivation Rate	- Uninstall Rate - Re-subscription Rate	- Email Campaigns - Loyalty Incentives	- Users Recovered - Lifetime Value	Customer Lifetime Value (CLTV)

Feature	Why It's Essential
Event Tracking	Helps measure how users interact with workouts, nutrition, wearables, and reminders.
Retention Analysis	Tracks how frequently users return — vital for improving stickiness and reducing churn.

THANK YOU
